

YOVI REVIKASARI

Software Developer | Machine Learning | Technology Educator

yovi.revikasari03@gmail.com | +6281284933872 | linkedin.com/in/yovi-revikasari | github.com/Yov54

PROFILE

Electrical Engineering graduate with hands-on experience in software development, machine learning, IoT, and technology education. Experienced in developing web and AI-powered applications, mentoring learners, and collaborating in multidisciplinary teams. Passionate about building technology that creates meaningful impact through innovation and continuous learning.

EXPERIENCE

Coding Instructor at The Lab Indonesia

Fulltime

Jan 2025 – Present

- Delivered Python and Blockly Programming classes for elementary to high school students through project-based learning.
- Guided students in developing computational thinking, logical reasoning, and problem-solving skills through coding and robotics projects.
- Mentored and trained probationary coding instructors by providing coaching on lesson delivery, classroom management, and curriculum implementation to maintain high teaching standards.

Machine Learning Mentor at Bangkit Academy 2024 Batch 1 & Batch 2

Feb 2024 – Jan 2025

- Mentored machine learning learners through technical discussions, project guidance, and personalized learning support.
- Assisted instructors during Instructor-Led Training (ILT) sessions and facilitated collaborative learning environments.
- Supported students in applying machine learning concepts and best practices to academic and capstone projects.

Frontend Engineer Intern at Harian Kompas

Jan 2024 – May 2024

Internship

Worked on multiple production web applications using Laravel, Vue.js, Tailwind CSS, and Bootstrap.

1. Career Website (karier.kompas.id)

- Developed new features for users and administrators, including filtering, data export, and recruitment workflow improvements.
- Enhanced interface usability to improve the job application experience.

2. Learning Management System (belajar.kompaskita.com)

- Improved learning interfaces and implemented automated point allocation and video optimization features.
- Enhanced user experience and platform efficiency.

3. SDM Administration Website (hr.kompas.id)

- Built document management and reporting modules for internal administrative processes.

Frontend Developer

Freelance

May 2023 – Dec 2023

- Developed responsive web applications using Laravel, Tailwind CSS, JavaScript, and MySQL for multiple client projects.
- Implemented new features and improved website usability through responsive interface development.
- Collaborated with the development team to deliver functional and maintainable web solutions.

PROJECTS

Herbitional App – AI-Powered Medicinal Plant Recommendation (*Bangkit Capstone Project*)

Machine Learning Developer

- Developed a disease prediction model with approximately 90% accuracy and NLP recommendation models using TensorFlow.
- Built and deployed machine learning services for an AI-powered herbal healthcare application.

IoT-Based Electric Scooter Monitoring System (Undergraduate Thesis)

- Designed an IoT monitoring system using LoRaWAN for real-time location tracking and rider safety.
- Integrated GPS, sensors, and microcontrollers to enable reliable long-range communication.

DoResume (*freelance project*)

Frontend Developer

- Developed responsive user interfaces for an online resume-building platform using Laravel and Tailwind CSS.
- Implemented interface improvements to enhance usability and user experience.

D'Best Grass (*freelance project*)

Frontend Developer

- Built product catalog and content management features using Laravel and Bootstrap.
- Collaborated with stakeholders to improve website functionality and user experience.

EDUCATION

Udayana University – Bali, Indonesia

Sep 2020 – Aug 2024

Electrical Engineering

- GPA: 3.95/4.00 (Cum Laude)
- Thesis: Design of a Location and Safety Monitoring System for Rental Electric Scooter Users Based on the Internet of Things Using LoRaWAN Technology.

PROFESSIONAL DEVELOPMENT

Digital Talent Scholarship – Fresh Graduate Academy (IT Support)

Apr 2024 – Jul 2024

- Completed hands-on training in IT support, networking fundamentals, system administration, and troubleshooting.

Long Range Communication System (LoRa) Training – Edutech Solution

Sep 2023 – Oct 2023

- Completed practical training on LoRa and LoRaWAN technologies for low-power, long-range IoT communication.

Bangkit Academy 2023 – Machine Learning Cohort

Feb 2023 – June 2023

- Completed an industry-led intensive program covering machine learning, deep learning, TensorFlow, and Google Cloud.
- Collaborated in a multidisciplinary team to develop an AI-powered healthcare application as the capstone project.

SKILLS

- **Programming Languages:** Python, PHP, JavaScript, C, C++, SQL
- **Frameworks:** Laravel, Vue.js, React.js, Tailwind CSS, Bootstrap
- **Machine Learning:** TensorFlow (*Certified*), PyTorch, Pandas, NumPy, Scikit-learn
- **Embedded & IoT:** Arduino, NodeMCU, Raspberry Pi, LoRaWAN, MQTT
- **Tools:** Git, MySQL, Firebase, Proteus, EasyEDA
- **Languages:** Indonesian, English.

ORGANIZATION & EVENT EXPERIENCE

- Assistant Lecturer for Embedded System in the Department of Electrical Engineering, Udayana University.
- Treasurer of MAESTRO - Student Journalism Team within the Faculty of Engineering, Udayana University.
- Secretary of Open Talk Elektro 2022.
- Contest Division Member of Electrical and Computer Competition (ELCCO) 2021 and 2022.
